

B.1 Configuration of each recorded run

Tag	Recorded	Git SHA	Matrix directory	Features	Feature hash	Model families	As-of gate on the lender panel (true)
baseline	2026-07-27	pre-manifest	model_matrix	41	9f2989029dcd	LightGBM, Logistic	n/a, no lender features
refactor	2026-08-06	52442f6	model_matrix	41	9f2989029dcd	LightGBM, Logistic, MLP	n/a, no lender features
refactor_det	2026-08-07	47efea3	model_matrix	41	9f2989029dcd	LightGBM, Logistic, MLP	n/a, no lender features
refactor_growthfix	2026-08-07	47efea3	model_matrix	41 (27 for growth)	9f2989029dcd	LightGBM, Logistic, MLP	n/a, no lender features
lender	2026-08-06	c67cc9f	model_matrix_lender	54	4ba0c29df138	LightGBM, Logistic, MLP	created_on, no lag, snapshot clock
lender_fixed	2026-08-07	e44c79a	model_matrix_lender_fixed	54	4ba0c29df138	LightGBM, Logistic, MLP	delivered_on, no lag, snapshot clock
lender_asof21	2026-08-07	e44c79a	model_matrix_lender_asof21	54	4ba0c29df138	LightGBM, Logistic, MLP	delivered_on, 21d created / 0d satisfied, snapshot clock
lender_asof21_det	2026-08-07	47efea3	model_matrix_lender_asof21	54	4ba0c29df138	LightGBM, Logistic, MLP	delivered_on, 21d created / 0d satisfied, snapshot clock
lender_calib_lo	2026-08-07	47efea3	model_matrix_lender_calib_lo	54	4ba0c29df138	LightGBM, Logistic, MLP	delivered_on, 2d created / 1d satisfied, extract clock
lender_calib	2026-08-07	47efea3	model_matrix_lender_calib	54	4ba0c29df138	LightGBM, Logistic, MLP	delivered_on, 4d created / 1d satisfied, extract clock
lender_calib_hi	2026-08-07	47efea3	model_matrix_lender_calib_hi	54	4ba0c29df138	LightGBM, Logistic, MLP	delivered_on, 7d created / 3d satisfied, extract clock

B.2 Run comparability

Tag	Role	What the run is
baseline	diagnostic: historical reference, predates the MLP and the bootstrap	First recorded run. 41 features, boosted and linear only, no MLP and no intervals. The fixed reference every later run is a diff against.
refactor	diagnostic: superseded by refactor_det, which reproduces it	The control after the pipeline rewrite: same matrix, same 41 features (same hash), full registry including the MLP.
refactor_det	comparable: the control every later run is read against	refactor under LightGBM determinism, with bootstrap intervals and per-origin metrics. The control every later run is read against.
refactor_growthfix	comparable: the shipped model	The control with growth cut to the 27 features that exist at its training origins. Other three targets untouched.
lender	diagnostic: leak exhibit, $P@100 = 1.000$	The A/B: +13 lender-identity columns from the Charges harvest. Its lending numbers are contaminated by the as-of gate and are kept as the exhibit of it.
lender_fixed	diagnostic: leak exhibit, $P@500 = 0.742$	The A/B with the gate moved to delivered_on. Halves the distortion and is still contaminated (lending $P@500 = 0.742$).
lender_asof21	diagnostic: superseded by lender_asof21_det, which reproduces it	The A/B with delivered_on plus a 21-day registration lag. Superseded: the 21 days were mostly a satisfaction-clock error.
lender_asof21_det	comparable: the A/B at the 21-day gate	lender_asof21 under determinism. Re-baselines the lender A/B; every delta reproduced exactly.
lender_calib_lo	comparable: the loosest gate tested	The calibrated gate at its loosest tested setting. Not a verdict run; it exists to show the gradient.
lender_calib	comparable: the calibrated gate at the point estimate	The calibrated gate at the point estimate, 4 days on creation and 1 on satisfaction.
lender_calib_hi	comparable: the tightest gate, the lender verdict is read off this	The calibrated gate at the leak-averse end, 7 days and 3 days. The run the lender verdict should be read off.
